

- **Avalon** is a transparent film which provides extra stability for knitwear and stretchy fabrics. Can be used as a topping or backing to help improve the appearance of embroidery. Available in different weight depending on the application.
- **Avalon 20 micron** - to be used as a topping to aid your embroidery for small lettering and to stop stitches sinking on deep pile fabrics such as towelling or fleece.
- After completing the embroidery, tear off the Avalon, brush away any excess or use a damp cloth or steam iron. Do not mist spray or leave embroidery wet as this may cause colours to run.
- **Avalon Strong 35 microns** - a thick textured film ideal for stabilising flimsy fabrics. Can also be used as a stable background for stitching lace patterns.
- **Avalon Ultraflat 90 microns** - strong, smooth film ideally used as a support for lace embroidery, if the design has been digitised for that purpose. Use as a stable background and embroider directly onto to produce a badge. Dissolves entirely when washed, leaving a light and airy embroidery constructed only of embroidery thread.
- **Avalon Plus 300 microns** - soft next to the skin with a non-woven fabric appearance. Ideal for light, delicate fabrics and polo shirts. Embroider directly onto or use as a backing which will dissolve completely after the first wash, leaving the back of the embroidery perfectly clean and comfortable to wear.
